Danish Non-Paper on priorities for network codes and guidelines for 2018

The Danish Government agrees with the Commission's priority to continue the ongoing work of implementing network codes and guidelines for 2018

The Danish Government welcomes the opportunity to comment on the Commission's public consultation on priorities for network codes and guidelines for 2018 based on Article 6(1) of Regulation (EC) No 714/2009 and Regulation (EC) No 715/2009.

The Danish Government fully support the recently developed and adopted network codes and guidelines on electricity and gas, that in a Danish perspective includes the most prioritised network codes and guidelines which support efficient market in Europe on electricity and gas.

Moreover, the Clean Energy Packages presented by the Commission November 30 2016 includes relevant areas for future network and guidelines.

All relevant parts are currently working on the creation and implementation on the network codes and guidelines. As we see, this process requires substantial resources from all relevant part including the Commission, ACER, ENTSO-E and the national regulators.

It is essential that these developed and adopted network codes and guidelines are implemented in a way that makes them possible to implement and enforce.

Therefore, the Danish Government finds it positive that the Commission prioritises resources for a full implementation and enforcement of the recently developed and adopted network codes for 2018. The priority to continue the ongoing work of implementing network codes and guidelines for 2018 is a priority that the Danish Government supports and agrees with. Consequently, the Commission's public consultation does not give rise to further comments from the Danish Government.
