

Statistical Data Report

On

Permanently Resettled Bhutanese Refugees in Denmark

April 2023

Prepared By
ABC DANMARK

Association of Bhutanese Communities in Denmark

Acknowledgment

We want to express our sincere gratitude to the ABC Danmark core team, whose invaluable contributions were vital in preparing this report. Our heartfelt thanks go to Thugten Dorjee Drukpa, Esben Gurung Madsen, Pabitra Subba Limbu, Purna Bahadur Dahal, Tejan Bahadur Tiwari, Arun Kathet, and Bhupas Gautam for their dedication and hard work.

We appreciate all the volunteers and local community members who supported us in collecting data from their respective areas. With your valuable assistance, this report was possible.

We also wish to thank the resettled Bhutanese community members in Denmark for their cooperation and willingness to provide us with their information. Your contributions have been instrumental in the success of this documentation.

Finally, we would like to express our deep appreciation to Frances Timberlake, the Campaigns and Community Engagement Coordinator from European Network on Stateless (ENS), and Eva Ersbøll, the Senior Researcher at the Danish Institute for Human Rights, a lawyer, and former legal assistant to the Danish Parliamentary Ombudsman. Your moral support and encouragement have been precious in our efforts to shed light on the situation of resettled Bhutanese refugees in Denmark.

Sincerely
Thugten Dorjee Drukpa
ABC Danmark President

1. Introduction:

In the early 1990s, over 100,000 ethnic Nepali individuals were expelled from Bhutan for demanding human rights and democracy. Seeking refuge in Nepal, we resided in UNHCR-aided Bhutanese refugee camps in eastern Nepal for nearly two decades. Despite several endeavors to return to Bhutan, our efforts were unsuccessful, and Nepal and the international community also failed to facilitate our repatriation, leading to a prolonged refugee crisis. With Bhutan refusing to take us back and local integration being denied by Nepal, the only option left was third-country resettlement, which UNHCR offered. Eight countries, including Denmark, expressed interest in supporting the UNHCR's call to resettle Bhutanese refugees in their countries.

As per our recent data analyses, Denmark resettled 845 Bhutanese refugees between 2008 and 2015 under the United Nations quota, with most of us being UN-verified vulnerable people who were mostly illiterate and had health issues. Although initially excited about starting a new life in Denmark and becoming Danish citizens, most of us soon faced challenges due to the strict immigration and naturalization laws. Illiteracy and health issues are the other factors preventing us from fulfilling the stringent requirements for Danish citizenship. Limited ability to learn Danish language also hinders our access to the job market and attainment of citizenship. Even to secure permanent residency, given that the requirements are identical to those for citizenship, has posed immense challenges for our people.

Despite our problems and grievances, many of us need help communicating effectively with the Danish government or other authorities. However, the Association of Bhutanese Communities in Denmark (ABC Denmark), a non-profit community organization, strives to be our voice. The organization utilizes various means and platforms to tell our story to the Danish government and gain comprehensive support for our statelessness issue. However, the lack of statistical information about resettled Bhutanese refugees in Denmark hindered effective communication and support for our statelessness issue. To address this issue, ABC Denmark has planned a storytelling project that includes publishing an open letter in a national newspaper, collaborating with other NGOs and INGOs, creating videos highlighting representative stories, and collecting accurate data to prepare a report. Collecting data and writing a report on the resettled Bhutanese refugees in Denmark is essential to the storytelling project. The primary objective of collecting data is to prepare a support document that presents our situation after resettlement in Denmark and serves as a historical record of our immigration details.

This report presents important statistical data on us, Bhutanese refugees who have been permanently resettled in Denmark. It provides a comprehensive analysis of the challenges we face in obtaining permanent residency and citizenship through naturalization, including difficulties in meeting the requirements due to illiteracy, health issues, and strict immigration and naturalization laws. The report also includes significant information such as the total number of current and initially resettled individuals, gender, countries of birth, and refugee camps of origin. Additionally, it covers arrival dates in Denmark, current residency status, literacy rates, labor force status, and places of residence. The report aims to help ABC Denmark effectively communicate our situation to concerned authorities, organizations, and individuals, enhance their understanding of our circumstances, and garner wider support in finding a solution to our stateless issue.

2. Methods

A team of six board members from ABC Danmark worked together to collect data on resettled Bhutanese refugees in Denmark. Due to our busy schedules, the data collection process took approximately three months, from January to March 2023. Since we are all volunteers, we could only contribute our spare time to the project.

To raise awareness about the data collection project, we held public meetings in Viborg, Holstebro, and Middelfart. We also shared information about the project at a Christmas event and as well through a virtual Zoom meeting.

The president of ABC Danmark led our data collection team. The entire data collection task was divided into five regional divisions: Hovedstaden (Capital Region of Denmark), Sjælland (Region Zealand), Syddanmark (Region of Southern Denmark), Midtjylland (Central Denmark Region), and Nordjylland (Region of Northern Denmark). Each member of the team was responsible for gathering data from one of these regions, with the president providing support as necessary. We employed a variety of methods to collect data, including face-to-face meetings and telephone conversations with community members who voluntarily provided their data. In certain areas, local community members also helped us to gather information. To understand the issue of statelessness among resettled Bhutanese communities in-depth and analyze the results of the obtained statistical data correctly, we also asked people for their opinions, expectations, and life experiences in Denmark.

The information we have collected is fundamental, yet it comprises essential details. We recorded the information presented in [Table 1](#) and documented it using an Excel spreadsheet.

Sn.	Name	Sex [M/F]	Date of Birth	Date of Arrival	Country of Birth	Current Address	Address in Bhutan	Address in Nepal	Literate/ Illiterate	Nationality	Job Status	M.tlf/ Email	Remarks
1.													
2.													
3													

Table 1. Excel spreadsheet

Our aim in utilizing this data is to gain insight into the statelessness status of resettled Bhutanese refugees in Denmark by examining statistical details. As members of the same community, we were aware that individuals who were born in refugee camps in Nepal and those above 50 years old are encountering significant obstacles in obtaining citizenship due to illiteracy and health issues among the elderly people and rigorous immigration and naturalization laws (It is thoroughly explained later in the report). Building upon this preliminary knowledge, we extracted relevant information from the collected data and presented it in separate tables with graphical representations. Moreover, we categorized the information into different age groups and, in some cases, conducted necessary calculations to perform detailed analyses. This entire process was carried out manually using Microsoft Excel spreadsheets.

To ensure a concise and clear report, we have only included our final statistical results in the result section. However, for more detailed information, we have enclosed statistical results from each region and municipality in 5. Appendix, from which the final results were obtained.

3. Results: Statistical data analyses on resettled Bhutanese refugees in Denmark

This result section presents the overall findings from our statistical data analyses conducted on the data collected from permanently resettled Bhutanese refugees in Denmark.

3.1. Number of resettled Bhutanese refugees in Denmark (First generation)

According to our analysis of the collected data, Denmark resettled 845 Bhutanese refugees from 2008 to 2015. Since then, 25 of these refugees have passed away, while the remaining 820 continue to reside in various parts of Denmark.

3.2. Number of children born in Denmark (Second generation)

Our data analysis reveals that 190 children, referred to as the second generation here, were born in Denmark. Fortunately, they do not face any problems in obtaining citizenship as children born in Denmark to stateless parents have direct access to Danish citizenship under Denmark's naturalization laws.

3.3. Number of Bhutanese Community people currently living in Denmark

Our collected data shows that 1,045 resettled Bhutanese community members live in Denmark. Of these, 820 individuals came directly to Denmark through the resettlement process conducted by the United Nations High Commissioner for Refugees (UNHCR), 35 individuals came through family reunification, and 190 individuals were born in Denmark. See [Table 2](#) for a brief overview, and for a percentage breakdown of the Bhutanese community residing in Denmark, refer to [Figure 1](#). Of the entire Bhutanese community, 79% are resettled refugees, 3% came through family reunification, and 18% are Denmark-born children of Bhutanese refugees. Check [Table 3](#) to see the breakdown of the numbers according to the region of their residence.

Number of initially resettled Bhutanese refugees currently residing in Denmark	820
Number of people who have come to Denmark through family reunification	35
Number of individuals born in Denmark (second generation)	190
Total	1045

Table 2. Number of Bhutanese community people currently living in Denmark

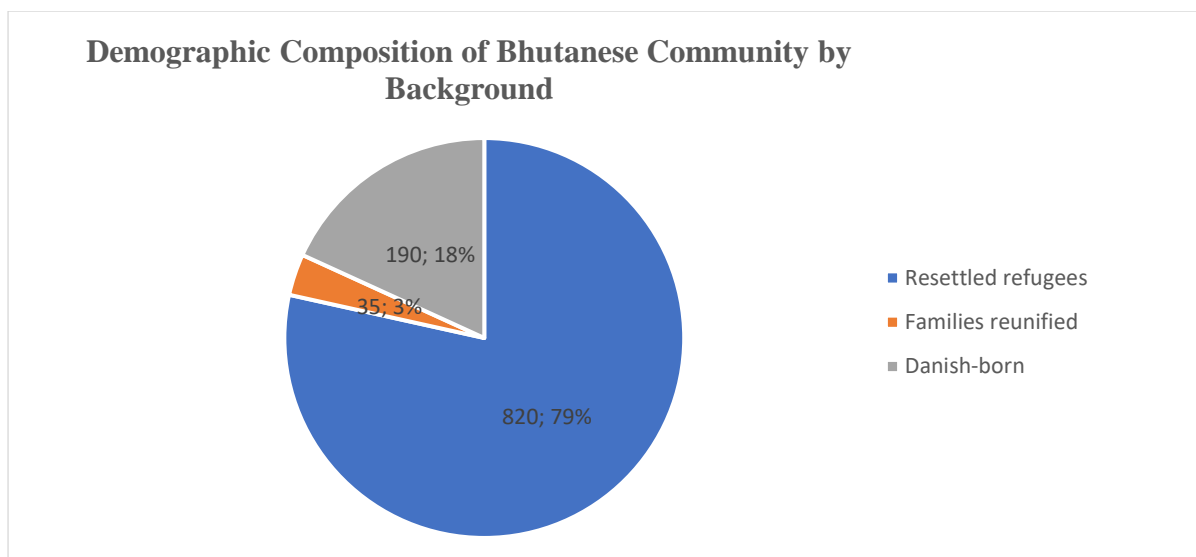

Figure 1. Number of Bhutanese community people currently living in Denmark

Regions	Hovedstaden	Sjælland	Syddanmark	Midtjylland	Nordjylland	Total
Resettled refugees	75	78	141	275	251	820
Families reunified	1	3	2	10	19	35
Danish-born	9	24	26	65	66	190
Result						1045

Table 3. No. of resettled Bhutanese community people living in different regions of Denmark

3.4. Number of Males and Females

Out of Denmark's total Bhutanese community people comprising 1045 individuals, 500 are male and 545 are female. This indicates that there are more female members in the community than males. For a quick overview, please refer to [Table 4](#) and [Figure 2](#).

No. of Males	No. of females	Total
500	545	1045

Table 4. Number of males and females

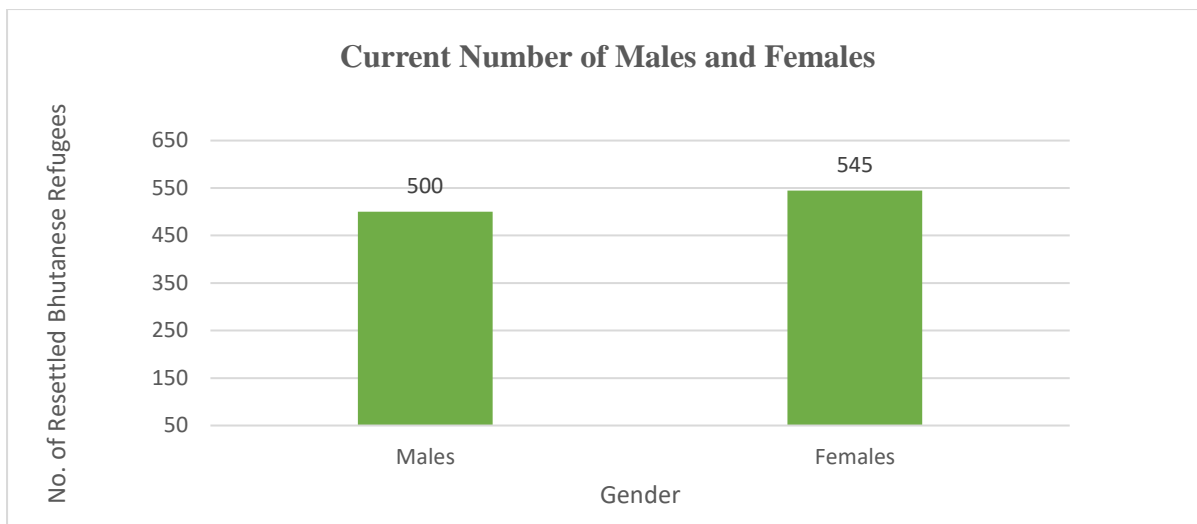

Figure 2. Number of males and females

3.5. Countries of Birth

Upon analyzing the data, we have collected, we have determined that out of the resettled Bhutanese refugee population in Denmark, 527 (50.4%) individuals were born in Bhutan, 324 (31%) individuals were born in Nepal, 190 (18.2%) individuals were born in Denmark, and 4 (0.4%) individuals were born in India. These findings indicate that most of the resettled Bhutanese people are from the first generation expelled from Bhutan. For a brief overview, please refer to [Table 5](#) and [Figure 3](#).

Countries of Birth	Bhutan	Nepal	Denmark	India
Number of people	527	324	190	4

Table 5. Countries of birth

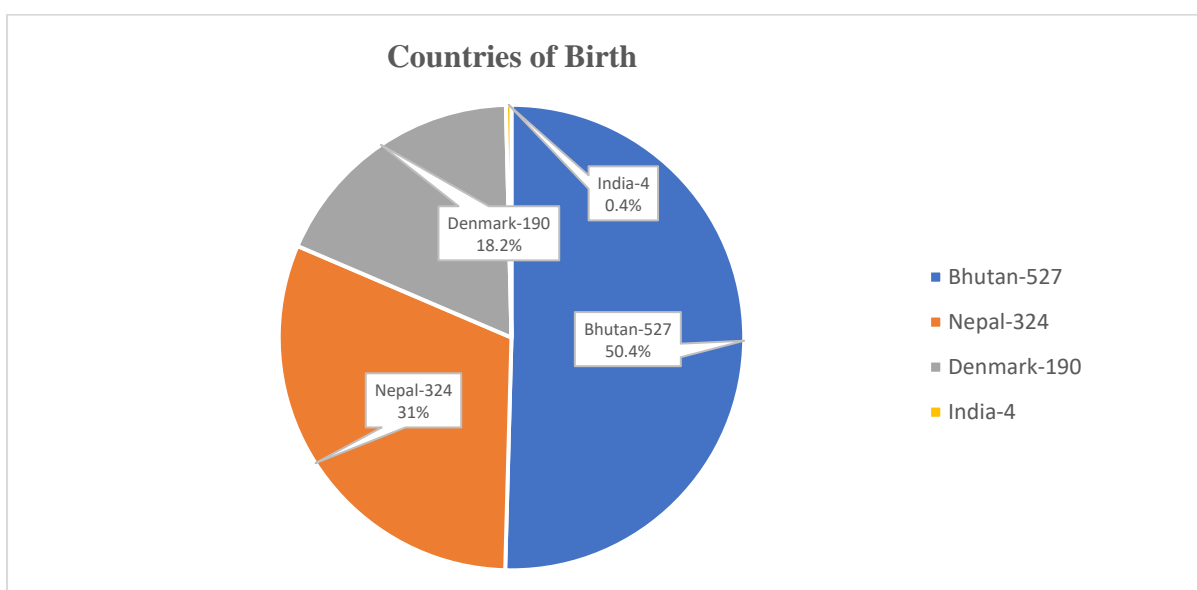

Figure 3. Countries of Birth

3.6. Municipalities with resettled Bhutanese community population

The Bhutanese community people resettled in Denmark is spread across all five regions and 34 municipalities, with the largest concentration of 129 individuals in Thisted and the smallest being one person each in Copenhagen, Aarhus, and Kolding. The dispersal of the community was part of Denmark's policy to help refugees learn the language, adapt to the way of life, and integrate into Danish society quickly. However, this approach has resulted in some elderly illiterate individuals feeling lonely and depressed as they struggle to learn the language and have no friends around to share feelings and spend time with. Additionally, it has been challenging for the community to preserve their language, culture, social values, and history, which they consider their identity. Despite wanting to integrate fully into Danish society, they also want to share their culture and values.

Most of the Bhutanese community people, comprising 350 individuals, live in 12 municipalities in the Central Denmark Region (Midtjylland). The least number of individuals, 85 people, live in 4 municipalities in the Capital Region of Denmark (Hovedstaden). In Region Zealand (Sjælland), there are 105 individuals spread across three municipalities. In the Region of Southern Denmark (Syddanmark), there are 169 individuals residing in nine different municipalities, while in the Region of Northern Denmark (Nordjylland), there are 336 individuals spread across six different municipalities. [Figure 4](#) below shows the names of municipalities; locations and the number of people residing there, and [Table 6](#) provides a brief overview of the regions, municipalities, and the number of people residing there.

Regions	Municipalities	No. of Municipalities	No. of People
Hovedstaden	Bornholm, Frederikssund, Copenhagen, Egedal	4	85
Sjælland	Lejre, Faxe, Naestved	3	105
Syddanmark	Soenderborg, Odense, Faaborg-Midtfyn, Svendborg, Nyborg, Toender, Middelfart, Aabenraa, Kolding	9	169
Midtjylland	Holstebro, Horsens, Skive, Struer, Skanderborg, Hedensted, Silkeborg, Ringkoebing-Skjern, Ikast-Brande, Viborg, Aarhus, Randers	12	350
Nordjylland	Aalborg, Thisted, Jammerbugt, Mariagerfjord, Morsoe, Vesthimmerlands	6	336
Total		34	1045

Table 6. Municipalities with Bhutanese community population

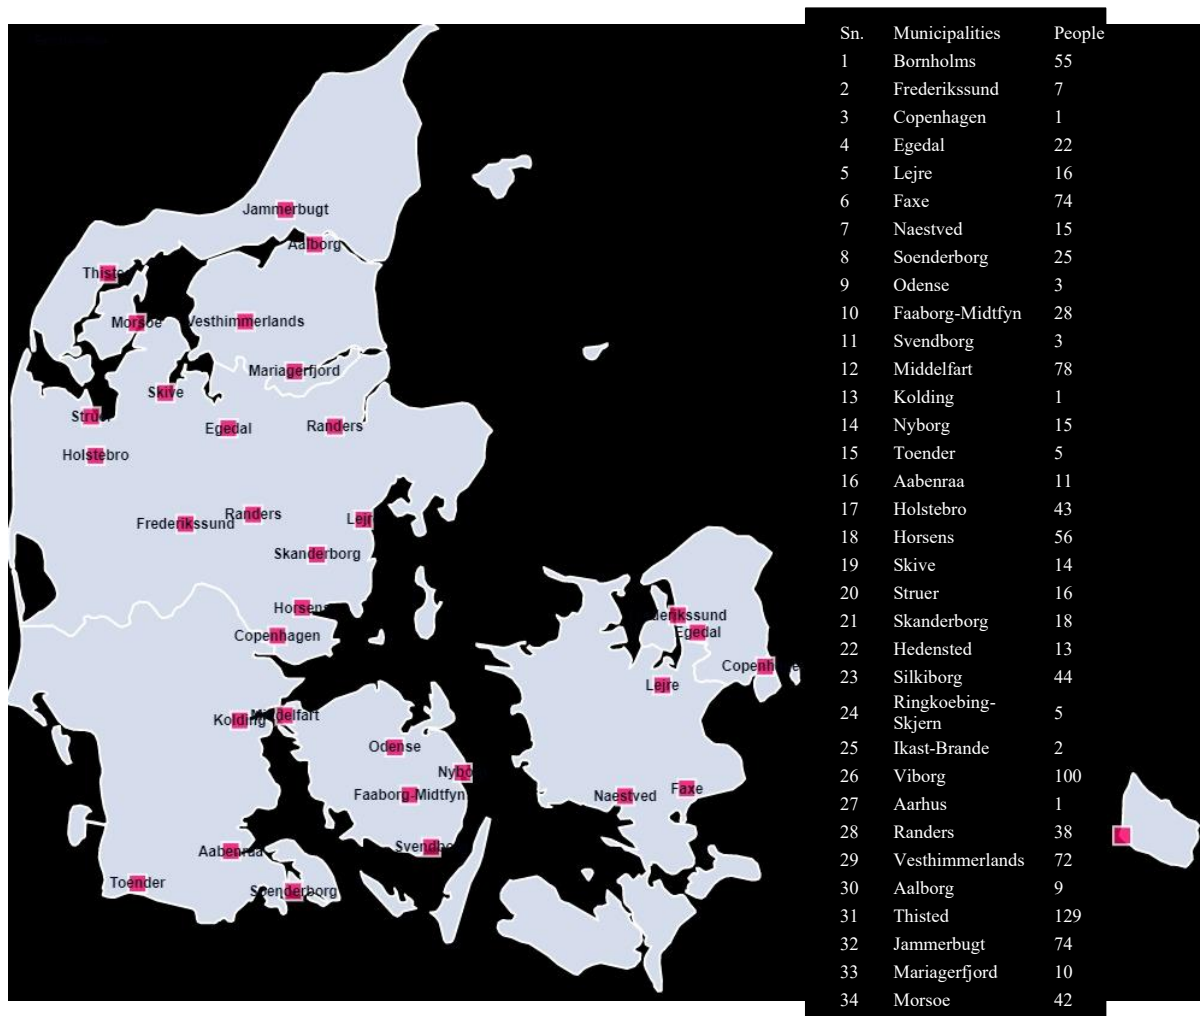

Figure 4. Map of Denmark showing the municipalities with the resettled Bhutanese population

3.7. Refugee camps in Nepal where resettled Bhutanese refugees in Denmark came from

Before resettling in Denmark through the UNHCR 3rd country resettlement program between 2008 and 2015, the 845 Bhutanese refugees who were initially resettled were residing in seven different refugee camps in Eastern Nepal, namely, Beldangi-I, Beldangi-II, Beldangi-III, Pathri Sanichare, Goldhap, Timai, and Khudunarbari. Unfortunately, since resettlement until the present day, 25 of the resettled individuals have passed away, leaving the current number of refugees who arrived in Denmark through the resettlement program at 820. A detailed breakdown of the refugees by their camp of origin and vital status is provided in Table 7 and Figure 5.

Refugee camps in Nepal	Number of resettled refugees from each camp		
	Alive	Death	Total
Beldangi-I	152	6	158
Beldangi-II	225	5	230
Beldangi-III	113	3	116
Pathri Sanichare	108	2	110
Goldhap	44	2	46
Timai	51	0	51
Khudunabari	127	7	134
Total	820	25	845

Table 7. Refugee camps in Nepal and the number of initially resettled refugees from each camp

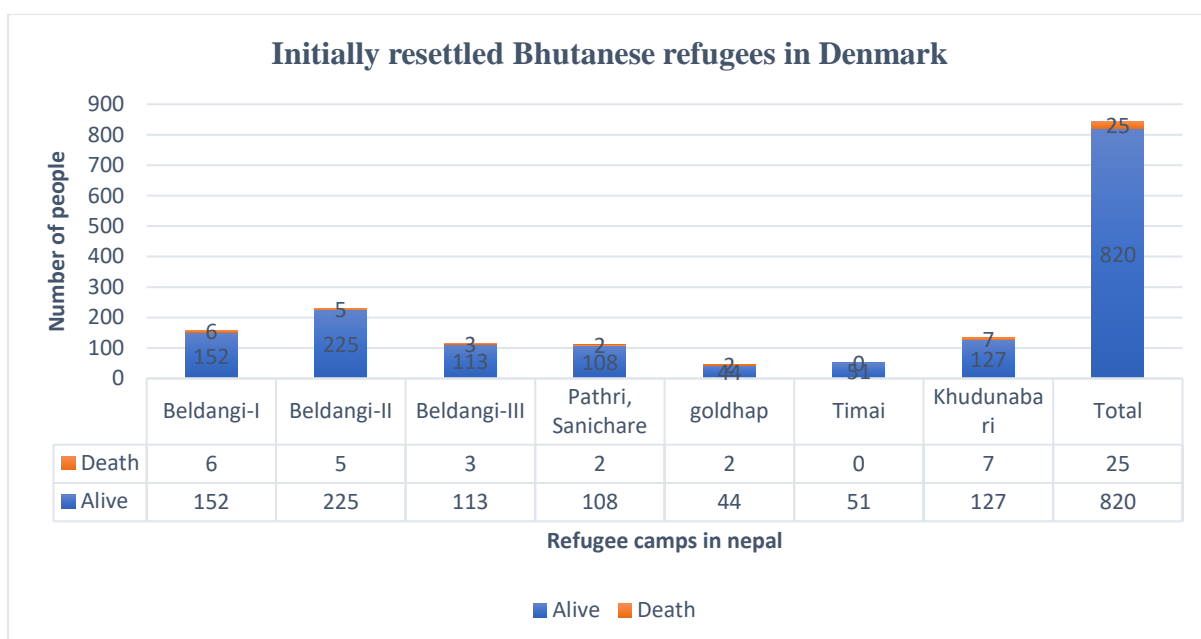

Figure 5. Refugee camps in Nepal and the number of initially resettled refugees from each camp

Table 8 shows the number of refugees who came to Denmark undergoing the resettlement process and currently reside in Denmark, excluding those who passed away. The data is categorized by their current regions of residence and the refugee camps they came from.

Refugee camps in Nepal	Number of resettled refugees from each camp					Total
	Hovedstaden	Sjælland	Syddanmark	Midtjylland	Nordjylland	
Beldangi-I	35	19	28	48	22	152
Beldangi-II	14	7	38	83	83	225
Beldangi-III	10	7	6	8	82	113
Pathri Sanichare	0	3	41	49	15	108
Goldhap	1	0	0	19	24	44
Timai	8	0	0	34	9	51
Khudunabari	7	42	28	34	16	127
Total	75	78	141	275	251	820

Table 8. Current number of refugees by their camps of origin and current regions of residence

3.8. Years of Arrival in Denmark

According to our data, Denmark resettled Bhutanese refugees from 2008 to 2015 under the UNHCR resettlement program, resulting in the resettlement of a total number of individuals that amounts to 845. The first group of refugees consisted of 18 individuals (3 families) in 2008, followed by 297 individuals in 2009, 11 in 2010, 254 in 2011, 130 in 2012, 108 in 2013, 23 in 2014, and 4 in 2015. See [Table 9](#) and [Figure 6](#) for a comprehensive summary. 35 individuals mentioned as "others" in [Table 1](#) and [Figure 1](#) came to Denmark through family reunification. Their arrival years are not included here, as our focus is on refugees who arrived through the resettlement program. However, the total of 880 shown in [Table 9](#) includes both; initially resettled refugees and those who came to Denmark through family reunification.

Years of Arrival	2008	2009	2010	2011	2012	2013	2014	2015	Others	Total
No. of people	18	297	11	254	130	108	23	4	35	880

Table 9. Years of arrival in Denmark

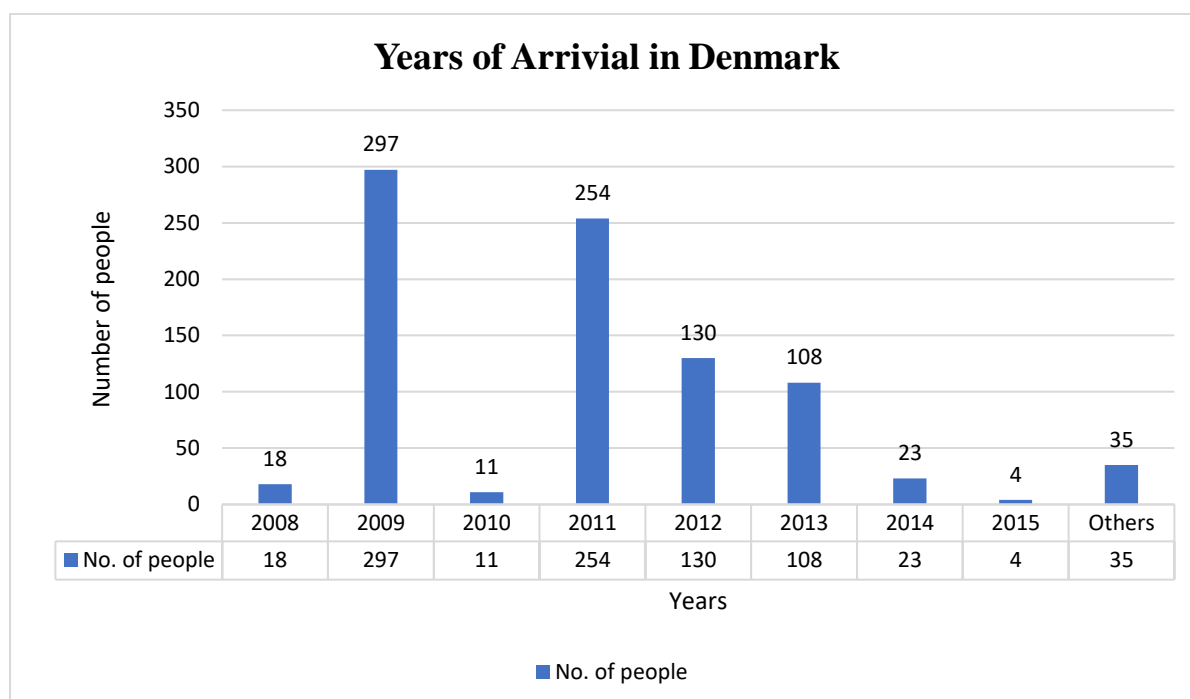

Figure 6. Years of arrival in Denmark

3.9. Literacy rate and residency status by age group

The most critical aspect of our report focuses on the issue of statelessness faced by resettled Bhutanese refugees in Denmark. Statelessness was the primary reason why we left refugee camps in Nepal to resettle in Denmark, and it remains the biggest challenge we face in Denmark. During the resettlement process, we were informed that citizenship could be obtained after fulfilling certain conditions and residing in Denmark for some years. However, despite being in Denmark for over a decade, we have not yet been granted Danish citizenship due to the strict immigration and naturalization laws in place. Illiteracy among members of our community has impeded our ability

to meet naturalization requirements as it limits their capacity to learn Danish, which in turn hinders their job opportunities, creating a significant obstacle in fulfilling the conditions for permanent residency and citizenship.

We were already aware that elderly illiterate individuals above 50 years old and those who arrived in Denmark at an early age are the most deprived groups in our community facing challenges in acquiring citizenship. The statistical data we have obtained confirms this, providing essential insights into the challenges faced by our community in Denmark.

To confirm which age group of people are mostly deprived of acquiring citizenship, we have categorized them into five different age groups, specifically 0-18, 18-30, 30-40, 40-50, and 50+, and have determined their literacy rate and residential status. The rationale for classifying people into these different age groups is that the abilities, legal accessibility, and issues of each of these age groups are distinct.

Our analysis of the data presented in Table 10 shows the number of individuals categorized into different age groups based on their residency status (stateless with temporary residency (TR), permanent residency (PR), and citizenship) and their literacy status (literate or illiterate). Further analysis of each of the obtained data is presented below the table for better comprehension.

Age Groups	No. of people	Literate	Illiterate	Stateless [TR]	Stateless [PR]	Citizen
0-18	289	289	0	151	0	138
18-30	202	195	7	174	19	9
30-40	211	189	22	192	14	5
40-50	107	43	64	99	6	2
50+	201	12	189	194	6	1
Total	1010	728	282	810	45	155

Table 10. Literacy rate and residency status by age group

3.9.1. Literacy rate

Our analysis reveals that there are currently 1045 Bhutanese community members residing in Denmark. But, as our focus is on determining the stateless situation of only the individuals who directly belong to the Bhutanese community, we have considered only 1010 (1045-35=1010) individuals for analysis. These 35 individuals excluded here are those who came to Denmark through family reunification, and they don't have statelessness issue as most of them have citizenship in other countries. Among 1010, 289 individuals are 0-18 years old and have a 100% literacy rate due to mandatory schooling in Denmark. In the age group of 18-30, out of 202 individuals, 7 are illiterate due to the lack of proper education in camps in Nepal or other reasons such as physical or mental conditions. In the age group of 30-40, 22 out of 211 individuals are illiterate. In the age group of 40-50, 43 individuals out of 107 are literate, while 64 are illiterate, resulting in a literacy rate of 40%. These individuals were born in Bhutan and primarily didn't attend school due to limited availability or the long commute required. Many did not attend school in refugee camps in Nepal due to age constraints. In the age group of 50+, only 12 individuals out of 201 are literate, resulting in a literacy rate of 5.97% (see

[Equation 1](#)). These individuals were mostly uneducated farmers in Bhutan, as there were very few schools, and education was not considered important at the time. Please refer to [Table 10](#) and [Figure 7](#) for a summary.

$$\begin{aligned} \text{Literacy rate of 50+ age group people} &= \frac{\text{No. of literate people}}{\text{Total no. of people}} * 100\% \\ &= \left(\frac{12}{201}\right) * 100\% = 5.97\% \end{aligned}$$

Equation 1. Literacy rate of 50+ age group people

For chart reading: Figure 7 presents a bar chart that depicts the number of individuals categorized into different age groups (0-18, 18-30, 30-40, 40-50, and 50+), based on their literacy status. The vertical axis displays the number of people, while the horizontal axis denotes the age groups. The green bars in the chart represent the number of literate individuals, while the red bars show the number of illiterate individuals. Additionally, the exact number of literate or illiterate people is displayed on top of each bar. A data table is also provided below the graph for further clarity, which shows the number of literate and illiterate individuals in each age group.

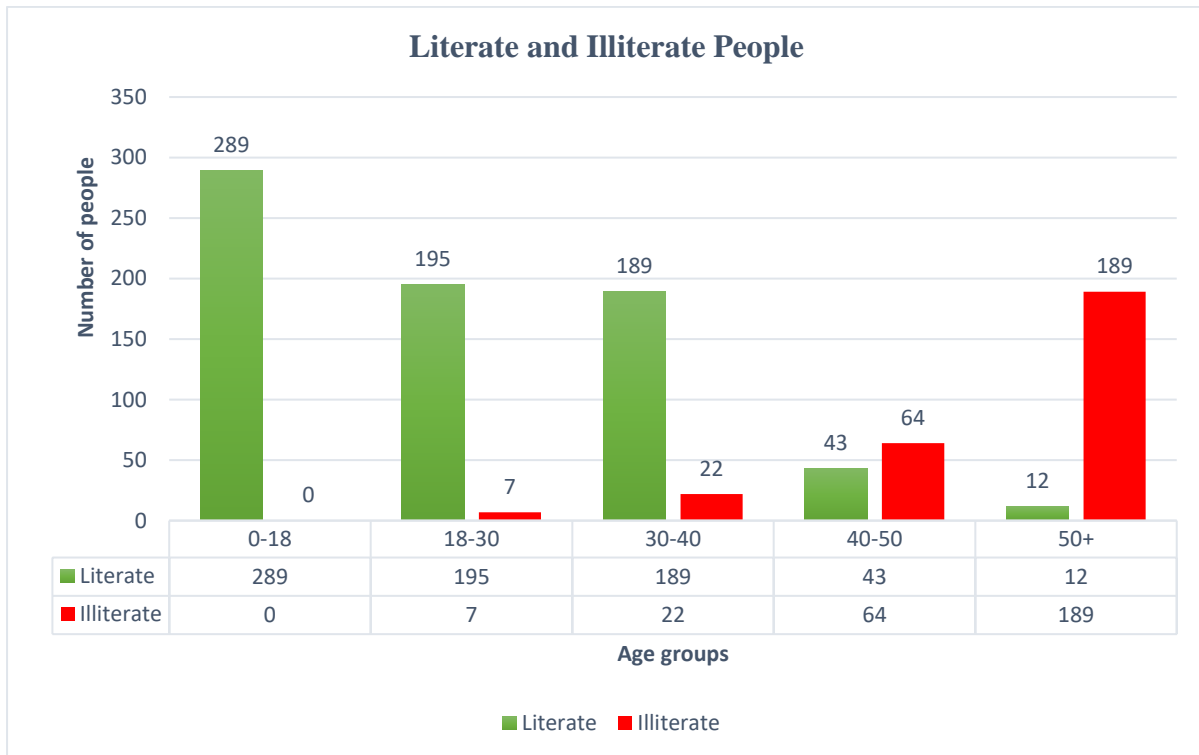

Figure 7. Number of literate and illiterate people by age group

3.9.2. Residency Status

Upon analyzing our connected data, it has been discovered that only 155 out of 1,010 individuals from the resettled Bhutanese community have managed to obtain citizenship, while a mere 45 have obtained permanent residency, which amounts to 15% and 5%, respectively. The remaining 810 individuals possess only temporary residency status, which constitutes 80% of the resettled refugees. It is worth noting that out of the 155 individuals who have obtained citizenship, 138 are children born in Denmark to stateless parents with direct access to citizenship. This means that only

17 individuals, which constitutes a meager 2% of the initially resettled refugees, have succeeded in obtaining Danish citizenship by fulfilling the requirements for naturalization.

Our data analysis reveals that 99 individuals (1.5 generation) who were born outside Denmark and are currently under the age of 18, along with 201 individuals over 50 years old, are among the most deprived age groups. These 99 individuals born outside Denmark must wait until they turn 18 to apply for permanent residence and thereafter citizenship. And in regards to the situation of 201 individuals over 50 of age, only one has succeeded in obtaining citizenship. These statistics are disheartening and cast a negative light on Denmark's commitment to providing a permanent resolution to the long-standing Bhutanese refugee predicament in Nepal, which Denmark had taken the initiative to address by bringing them to Denmark. The failure of UNHCR is also evident, as they initiated the resettlement program but couldn't follow up to see if their goal was fully achieved.

For a brief overview of the overall data, please refer to [Figure 8](#), [Figure 9](#), [Figure 10](#), [Table 11](#), and [Figure 11](#). To provide further clarity, explanations, interpretations, and analyses have been presented for each data point presented in the figures and tables.

[Figure 8](#) presents a pie chart displaying the residency status of 1010 Bhutanese community people currently living in Denmark. The chart shows that 80% or 810 individuals are stateless individuals with temporary residency (TR), represented by the red color. Meanwhile, 5% or 45 individuals, represented by the yellow color, have successfully acquired permanent residency (PR), and 15% or 155 individuals, represented by the green color, have obtained Danish citizenship. Notably, the number of individuals granted citizenship exceeds those with permanent residency because children born in Denmark to stateless parents get direct access to citizenship. Out of the 155 individuals who have obtained citizenship, 138 were born in Denmark to stateless parents and were granted citizenship directly.

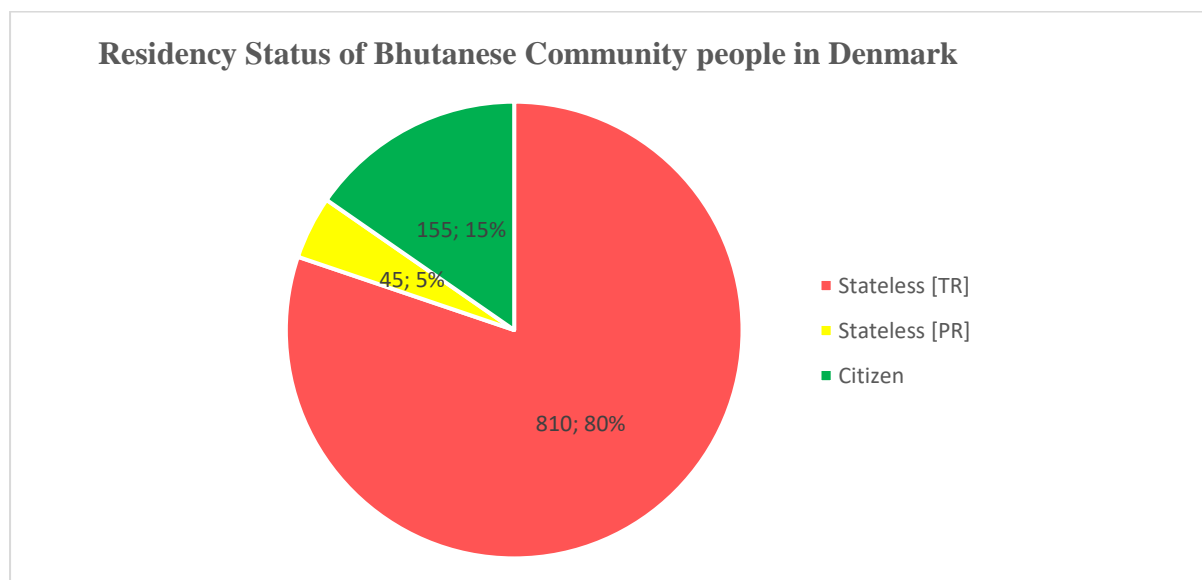

Figure 8. Residency status of Bhutanese Community people in Denmark

In [Figure 9](#), a pie chart displays the residency status of individuals born to stateless parents of resettled Bhutanese refugees in Denmark. Out of a total of 190 people born in Denmark, 138 individuals (73%) are represented by the green color and have been granted citizenship, while 52 individuals (27%) represented by yellow color have not yet been granted citizenship. However,

obtaining citizenship should not be a significant hindrance for those who have not yet received it. They have direct access to citizenship and are likely to be granted it soon. This group includes newly born individuals who have not yet applied for citizenship, those who have applied and are awaiting a response, or those who have not yet applied or had their application denied due to errors in their parents' residency status.

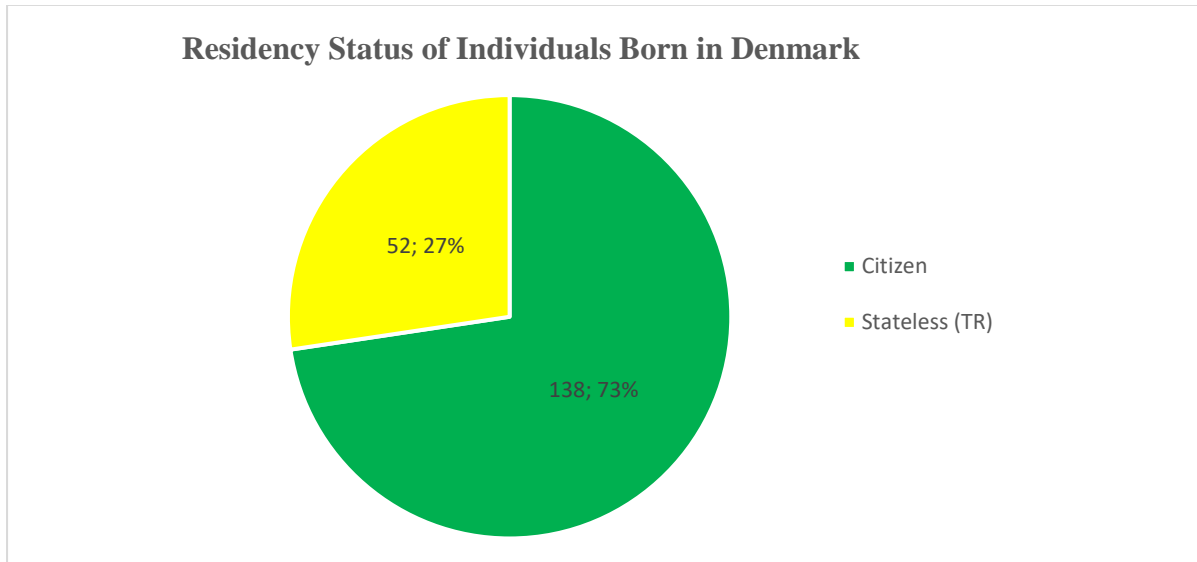

Figure 9. Residency status of Individuals born in Denmark

The pie chart in Figure 10 illustrates the residency status of 820 individuals (first generation) who were born in refugee camps in Nepal, Bhutan, or India but not in Denmark. The chart shows that only 17 individuals, or 2% of the total, represented by the green color, were able to acquire citizenship by fulfilling the requirements of naturalization. In addition, 45 individuals, or 6%, represented by the yellow color, have obtained permanent residency (PR), while the majority of individuals, 758 or 92%, represented by the red color, have been granted only temporary residency (TR).

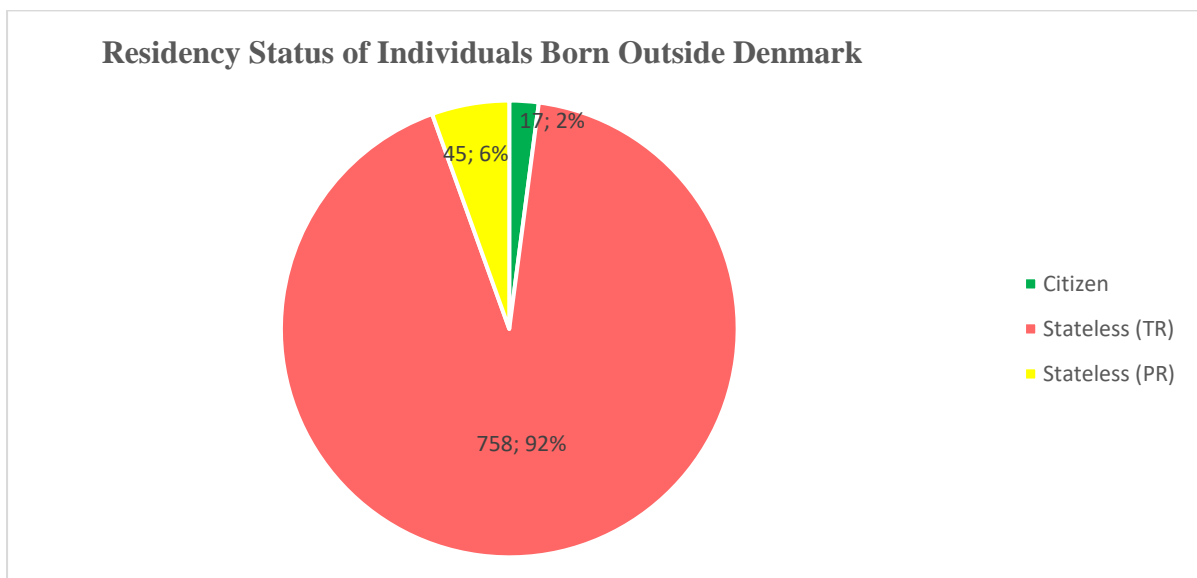

Figure 10. Residency status of initially resettled Bhutanese refugees in Denmark

Our community is grappling with a statelessness issue that is affecting people in different ways depending on factors such as immigration and naturalization laws, health, and literacy levels. To understand the problem better, we divided individuals into five age groups and analyzed their residency status. Our findings show that those most impacted by statelessness are individuals under 18 who were born outside of Denmark and those over 50 who are illiterate. According to our data, 99 (Table 11) individuals were born outside Denmark and are currently under 18 years, and 201 (Figure 11, $194+6+1=201$) individuals above 50 years old are particularly vulnerable.

These 99 individuals born outside Denmark must wait until they turn 18 to apply for permanent residency and thereafter citizenship. From 18 to 19, they can apply for permanent residence permit, and the processing time for approval is ten months. Applicants must be working or studying at the time of application and until it is approved. And after that, to acquire Danish citizenship by naturalization, the applicant must have a permanent residence permit for a minimum of one year when the bill on naturalization is passed and must have been working for at least three and a half years while the bill is passed. This means that even if everything goes smoothly, the applicant will be at least 25 years old by the time they receive citizenship. And this won't be possible unless they quit their higher education. Those who choose to receive a university education will be above 30 years of age at the time they acquire citizenship.

This situation poses a challenge to the Danish government as it may lead to a loss of skilled manpower in the future. For example, children like Chhaya Rai, who arrived in Denmark in 2012 at the young age of one and have known no other home than Denmark, are among those who are most affected. Chhaya has been living in Denmark since she was nine months old, and her younger sister, born in Denmark, already has citizenship. However, Chhaya will still have to wait over 15 years from now to become a Danish citizen solely because she was not born in Denmark. This prolonged wait for citizenship for children like Chhaya is a violation of children's right to citizenship, and the Danish government must review its naturalization laws to address this issue.

Age Group	Total no. of people	Number of people born in Denmark	Number of people born in refugee camps in Nepal
0-18	289	190	99 Cal. (289-190=99)

Table 11. Number of people who were born in Nepal and are currently under 18 years

In Figure 11, a bar graph displays the residency status of resettled Bhutanese refugees in Denmark including Danish-born (second generation) children, categorized into five age groups: 0-18, 18-30, 30-40, 40-50, and 50+. The vertical axis shows the number of people, and the horizontal axis shows the age groups. The red bars indicate stateless individuals with temporary residency (TR), the yellow bars show stateless individuals with permanent residency (PR), and the green bars display individuals who have successfully achieved citizenship within their age group.

Within the 0-18 age group, 151 individuals are stateless with temporary residency, and 138 have acquired citizenship, bringing the total to 289 individuals. Out of these, 190 individuals were born in Denmark and have direct access to citizenship, while the remaining 99 individuals under 18 years old were born outside Denmark, in refugee camps in Nepal and therefore, they don't have direct access to citizenship. To obtain citizenship, they must follow the standard procedure, starting with applying for permanent residency after turning 18. Therefore, none of them have even

permanent residency, making them one of the most affected age groups in terms of obtaining citizenship.

In the 18-30 age group, there are 174 stateless individuals with temporary residency, 19 with permanent residency, and only 9 individuals who have successfully acquired Danish citizenship. In the 30-40 age group, 192 individuals are stateless with temporary residency, 14 have permanent residency, and only 5 individuals have achieved citizenship. In the 40-50 age group, 99 individuals have temporary residency, 6 have permanent residency, and only 2 individuals have succeeded in acquiring citizenship. In the 50+ age group, 194 individuals are stateless with temporary residency, 6 have permanent residency, and only 1 has succeeded in achieving citizenship. These individuals above 50 are the most vulnerable, with only approximately 6% being literate, which is the primary factor hindering them from attending naturalization. For the majority of these individuals, it is impossible to fulfill the requirements for naturalization and acquire citizenship. Without the Danish government addressing their issue by providing special dispensation to gain access to citizenship, almost 99% of this age group will remain stateless for life.

The number of individuals who have acquired permanent residency and citizenship are seen declining in the graph as the Age Groups goes up. This is due to the decreasing literacy rate as the age group increases. Refer to [Table 10](#) to see the literacy rate. Table data is also presented below the graph for more clarity: check [Figure 11](#) for a brief overview.

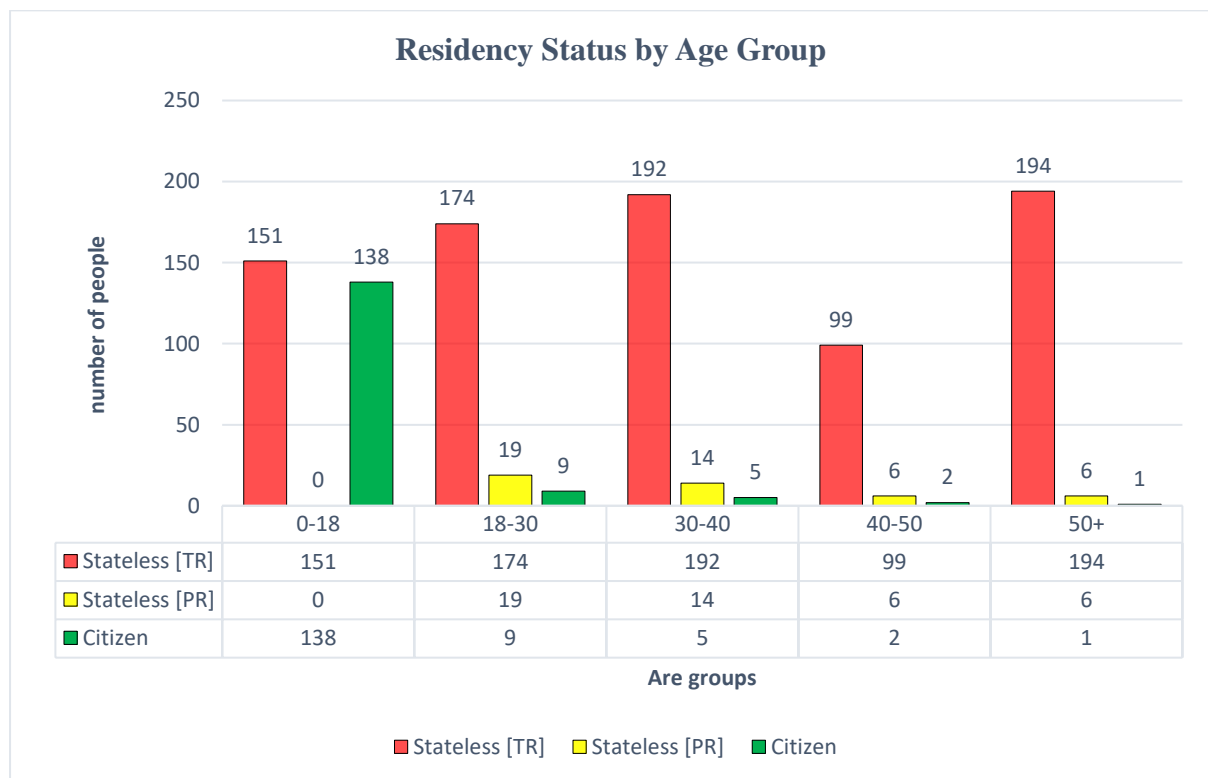

Figure 11. Residency status by age group

3.10. Labor force status

One of the requirements for resettled Bhutanese refugees in Denmark to obtain citizenship is to have three and a half years of job. However, many of these individuals are unable to meet this requirement due to their inability to learn the Danish language, which is compounded by high levels of illiteracy among the elderly population. According to our data analysis, only 309(31%) of the total population of 1010 individuals are employed full-time.

Further analysis of the data shows that there are 653 individuals within the age group of the labor force. Of these individuals, 309 are employed full-time, 52 are employed part-time, 16 work in flexible or substitute positions, 113 are students, 81 have taken early retirement, 68 are pensioners, and 82 are unemployed. Only those 309 individuals who work full-time can meet the job requirement for permanent residency and eventual citizenship, provided they have been employed for the last three and a half years. In addition, 113 individuals currently studying may eventually meet the job requirement by working after completing their education, but it will take many more years.

However, the remaining 299 individuals, consisting of 52 part-time workers, 16 flexible/substitute workers, 82 jobless individuals, 81 early pensioners, and 68 pensioners, may never be able to fulfill the job requirement for citizenship. Moreover, the actual number of individuals who cannot meet this requirement may be even higher than 29, since some of those employed full-time are also illiterate and thus unable to fulfill the language requirements.

The number of individuals who have retired early (81) exceeds the number of elderly pensioners (68). This is because the majority of resettled Bhutanese refugees in Denmark are extremely vulnerable, with issues related to physical and mental health as well as illiteracy. The number of jobless individuals and those doing flexible jobs is also quite high, at 82 and 16 individuals respectively. In Denmark, no one is allowed to stay at home without working and receive social benefits, so these individuals must have some genuine issue, either physical or mental, that prevents them from working. However, many of them are still engaged in training jobs, which we have classified as jobless, as they are not counted as jobs for fulfilling the job requirement for permanent residency and citizenship.

If training jobs, substitute jobs, flexible jobs, and part-time jobs were counted as full-time jobs for fulfilling the job requirement for permanent residency and citizenship, many more people would be able to meet the requirement for permanent residency and citizenship.

For a quick overview of the labor force status, please refer to [Figure 12](#), which shows a pie chart with the following color codes: green (31%) for full-time workers, blue (5%) for part-time workers, dark red (1%) for flexible/substitute workers, red (8%) for jobless individuals, yellow (40%) for students, light gray (8%) for early retirees, and purple (7%) for pensioners.

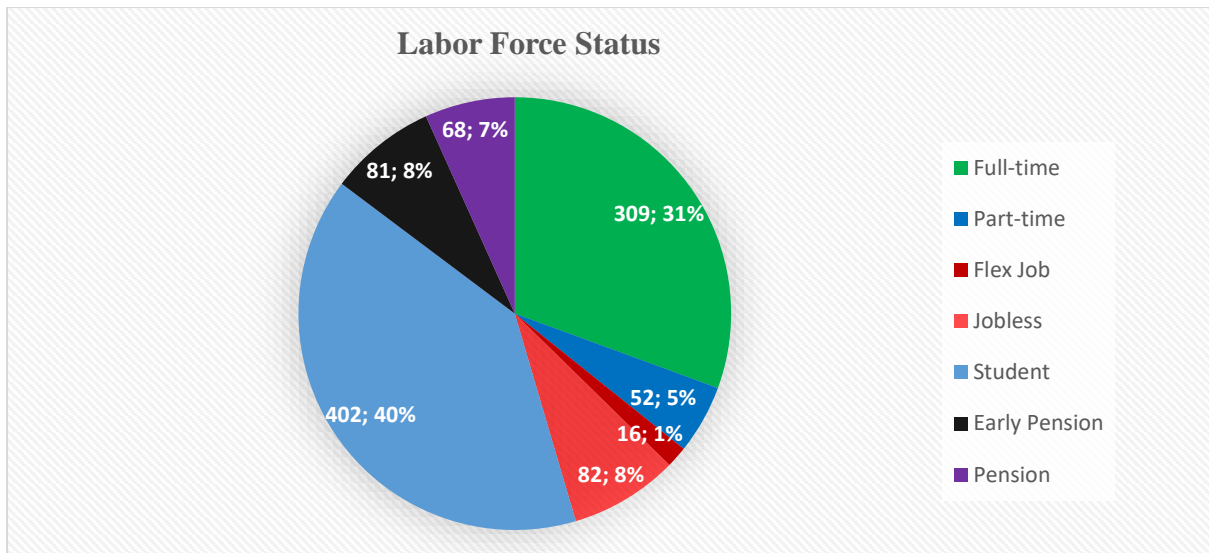

Figure 12. Labor force status

The number of people who fall within the labor force age range = Total no. of people – (individuals under 18 years + pensioners) = 1010 – (289 + 68) = 653 individuals

Equation 2

The number of students who fall within the labor force age group = Total number of Student – Individuals under 18 years = 402 – 289 = 113 individuals

Equation 3

Refer to [Table 12](#) for the numbers/values used

Furthermore, we have analyzed the obtained data categorizing them into 5 different age groups (0-18, 18-30, 30-40, 40-50 and 50+) since their status varies with different age groups of people. Here is the interpretation of our data analyses. As individuals under 18 years are not subjected to the workforce, we have considered all 289 individuals as students. Among the 202 individuals in the 18-30 age group, 88 are working full-time, 8 are working part-time, 2 are doing flexible or substitute jobs, 18 are jobless, 84 are studying, and 2 individuals have retired early. Most of the people in this age group are students, and among the 18 jobless individuals, some are seeking employment after completing their education or have recently quit or been fired from their job.

Individuals in the 30-40 age group are more active in the job market, as they do not belong to the normal age group for studying. Of the 211 individuals in this age group, 147 are working full-time, 15 are working part-time, 2 are doing flexible or substitute jobs, 18 are jobless, and 2 individuals have retired early. In the 40-50 years age group, out of 107 individuals, 50 are working full-time, 16 are doing part-time jobs, 2 individuals are doing flexible or substitute jobs, 16 are jobless, 5 are studying, and 18 individuals have retired early.

As only 6% of the people in the 50+ age group are literate, their access to jobs is also very limited. Only 24 individuals out of 201 have managed to find full-time jobs. The other 13 individuals are

doing part-time jobs, 10 are doing flexible jobs, 30 are jobless, 2 are studying, 54 individuals have retired early, and 68 are pensioners. Refer to [Table 12](#) for a brief overview of labor force status categorized by age groups.

Age Groups	No. of people	Labor force status						
		Full-time Job	Part-time Job	Flex Job / Substitute	Jobless	Student	Early Pension	Pension
0-18	289	0	0	0	0	289	0	0
18-30	202	88	8	2	18	84	2	0
30-40	211	147	15	2	18	22	7	0
40-50	107	50	16	2	16	5	18	0
50+	201	24	13	10	30	2	54	68
Total	1010	309	52	16	82	402	81	68

Table 12. Labor force status by age group

4. Conclusion

Due to Denmark's strict immigration and naturalization laws, it is extremely challenging for resettled Bhutanese refugees in Denmark to obtain Danish citizenship. Our data analyses reveal that, out of the 845 initially resettled refugees, only 17 individuals (2%) have been granted citizenship, and an additional 45 have completed the first mandatory step by obtaining permanent residency. This low number highlights the significant issue of statelessness among the resettled Bhutanese refugees in Denmark.

The situation is particularly dire for the 201 elderly illiterate refugees over 50 years of age. Only one of them has been granted citizenship, and six have secured permanent residency. Of the 201, only 12 individuals are literate, and only 24 individuals work full-time. Unfortunately, 194 of these refugees, who currently have only temporary residency, may never be able to obtain citizenship due to the need to pass active citizenship, language, and citizenship tests.

For 99 refugees (1.5 generation) who arrived in Denmark at a young age and are currently under 18, the situation is especially challenging. They will need time to pursue a university education to prosper their life and fulfill job requirements before they become eligible for citizenship, which could take until their early thirties. Despite having grown up in Denmark with no other home, they still face a prolonged wait to become Danish citizens depending on their current age.

To help these refugees fulfill the job requirements for permanent residency and citizenship, one possible solution is to count training jobs, substitute jobs, flexible jobs, and part-time jobs as full-time jobs. Additionally, exempting illiterate individuals from language and citizenship test requirements could enable more people to access citizenship. However, at present, all refugees must meet the same requirements.

While the severity of the situation differs for individual refugees, access to citizenship is a significant concern for all resettled Bhutanese refugees in Denmark. The other age groups of refugees are relatively less affected, but the problem is still severe. It is essential that the Danish government recognizes the gravity of the issue and takes appropriate measures.

Importantly, the Bhutanese refugees in Denmark were brought to the country by the Danish government itself under the UN quota to live here permanently, unlike other immigrants. Furthermore, most of us are UNHCR-verified vulnerable individuals due to physical and mental health issues as well as illiteracy. Despite several attempts to repatriate, Bhutan has refused to take us back, and the international community has also failed to facilitate our return. Denmark, which had committed us to resettle permanently in Denmark, is also indirectly denying us citizenship by generalizing our situation with that of other immigrants and imposing the rigorous immigration and naturalization laws. Moreover, the UNHCR, which initiated the resettlement program, is also not showing any genuine concern. As a result of all these, we have been stateless for the last three decades, with no other choice but to continue living as stateless individuals in Denmark.

The low number of Bhutanese refugees who were initially resettled and have since obtained citizenship is evidence of the failure of both the UNHCR and the Danish government. For us, the resettlement program has been nothing more than relocation. The international community has also neglected our issue, leaving us forgotten and stateless. Denmark's participation in the UNHCR

program should be on the terms mentioned in the UNHCR's Resettlement Handbook, which defines resettlement as the selection and transfer of refugees from a State in which they have sought protection to a third State which has agreed to admit them – as refugees – with permanent residence status. Therefore, it is imperative that the Danish government recognizes our situation and provides a solution, either by granting us citizenship directly or by offering special dispensation that gives us easy access to citizenship.

By means of this report, ABC Danmark on behalf of all resettled Bhutanese refugees in Denmark appeals to the Danish Government to take immediate action to address the statelessness issue of resettled Bhutanese refugees in Denmark.

5. Appendix

Appendix presents a comprehensive statistical overview categorized by region and individual municipalities, displayed in tables. Each region's data is listed first, followed by the municipalities where our people reside within that region. This format is repeated for the remaining information. As the main results have already been analyzed and presented in the result section, no explanations, interpretations, or analyses are included for the data in the appendix. The information is solely presented in tables, which were used to derive the main results. The information is organized by region, featuring Hovedstaden, Sjælland, Syddanmark, Midtjylland, and Nordjylland in sequence.

5.1. Region Hovedstaden (Capital City Region)

Currently, 85 resettled Bhutanese community members are living in the Capital City Region (Hovedstaden). They are spread across four municipalities: Bornholms, Frederiksund, Copenhagen, and Egedal. All the information pertaining to the Hovedstaden region is presented in various tables below.

Number of people who came to Denmark from refugee camps in Nepal	75
Number of people who came to Denmark through family reunification	1
Number of people born in Denmark	9
Total	85
