Letter of support

The **Institute of Educational Sciences**, as the most important research institute in the field of educational sciences in Romania, would like to express its support for the future activity of the Innovative Centre for General Education (SPF). SPF is a very important partner in the European Project "Take Part Too" that we are developing together from 2004 until 2006. The project has been developed starting from an innovative idea that our SPF partners provided us and it's aiming to create an European network of upper secondary schools that are to involve in a learning and living democracy e-learning project.

We consider SPF to be one of the few centres on the European level that are really inspiring and innovating the educational practice and gives a clear and concrete platform for the new changes that are required by the future.

Therefore we would really like to acknowledge our deep consideration for all their activity and especially for their contribution to the project, as well as our intentions to continue our collaboration with SPF in future European projects.

We strongly recommend that SPF should be supported in all their innovative actions and provide other European countries with their pedagogical expertise.

Sincerely yours,

Cesar Birzea , Ph.D

Director
Institute of Educational Sciences
