

Tariffs payable per kWh of electricity produced

The level of the generation tariff is dependent on the technology and the system size and type

Table of Feed-In Tariffs from 1st December 2012 to 31st March 2013

This includes adjustments for [degression](#), together with [index linking](#) effective up to April 2012.

Historical and future tariffs

See these more detailed tables to view:

- [Table B](#): Tariffs payable now on previously installed systems (including [indexation](#))
- [Table C](#): Starting tariffs applicable to previously installed systems
- [Table D](#): Starting tariffs applicable in future periods (including [degression](#))

We used to show all this in one table, but there have already been so many changes to the tariffs and the bands ...

Ofgem's equivalents to our table B are available [here](#).

Other benefits

These tables show only the generation tariff. The Feed-In Tariffs scheme also provides two further benefits: an additional payment for surplus energy exported to the grid (this is called the [export tariff](#)) and a saving on energy purchased from your electricity supplier.
