

The Conoid

- Quantum nano biotechnology
-a key to understand **Toxoplasma Gondii**

Bo Hembæk Svensson

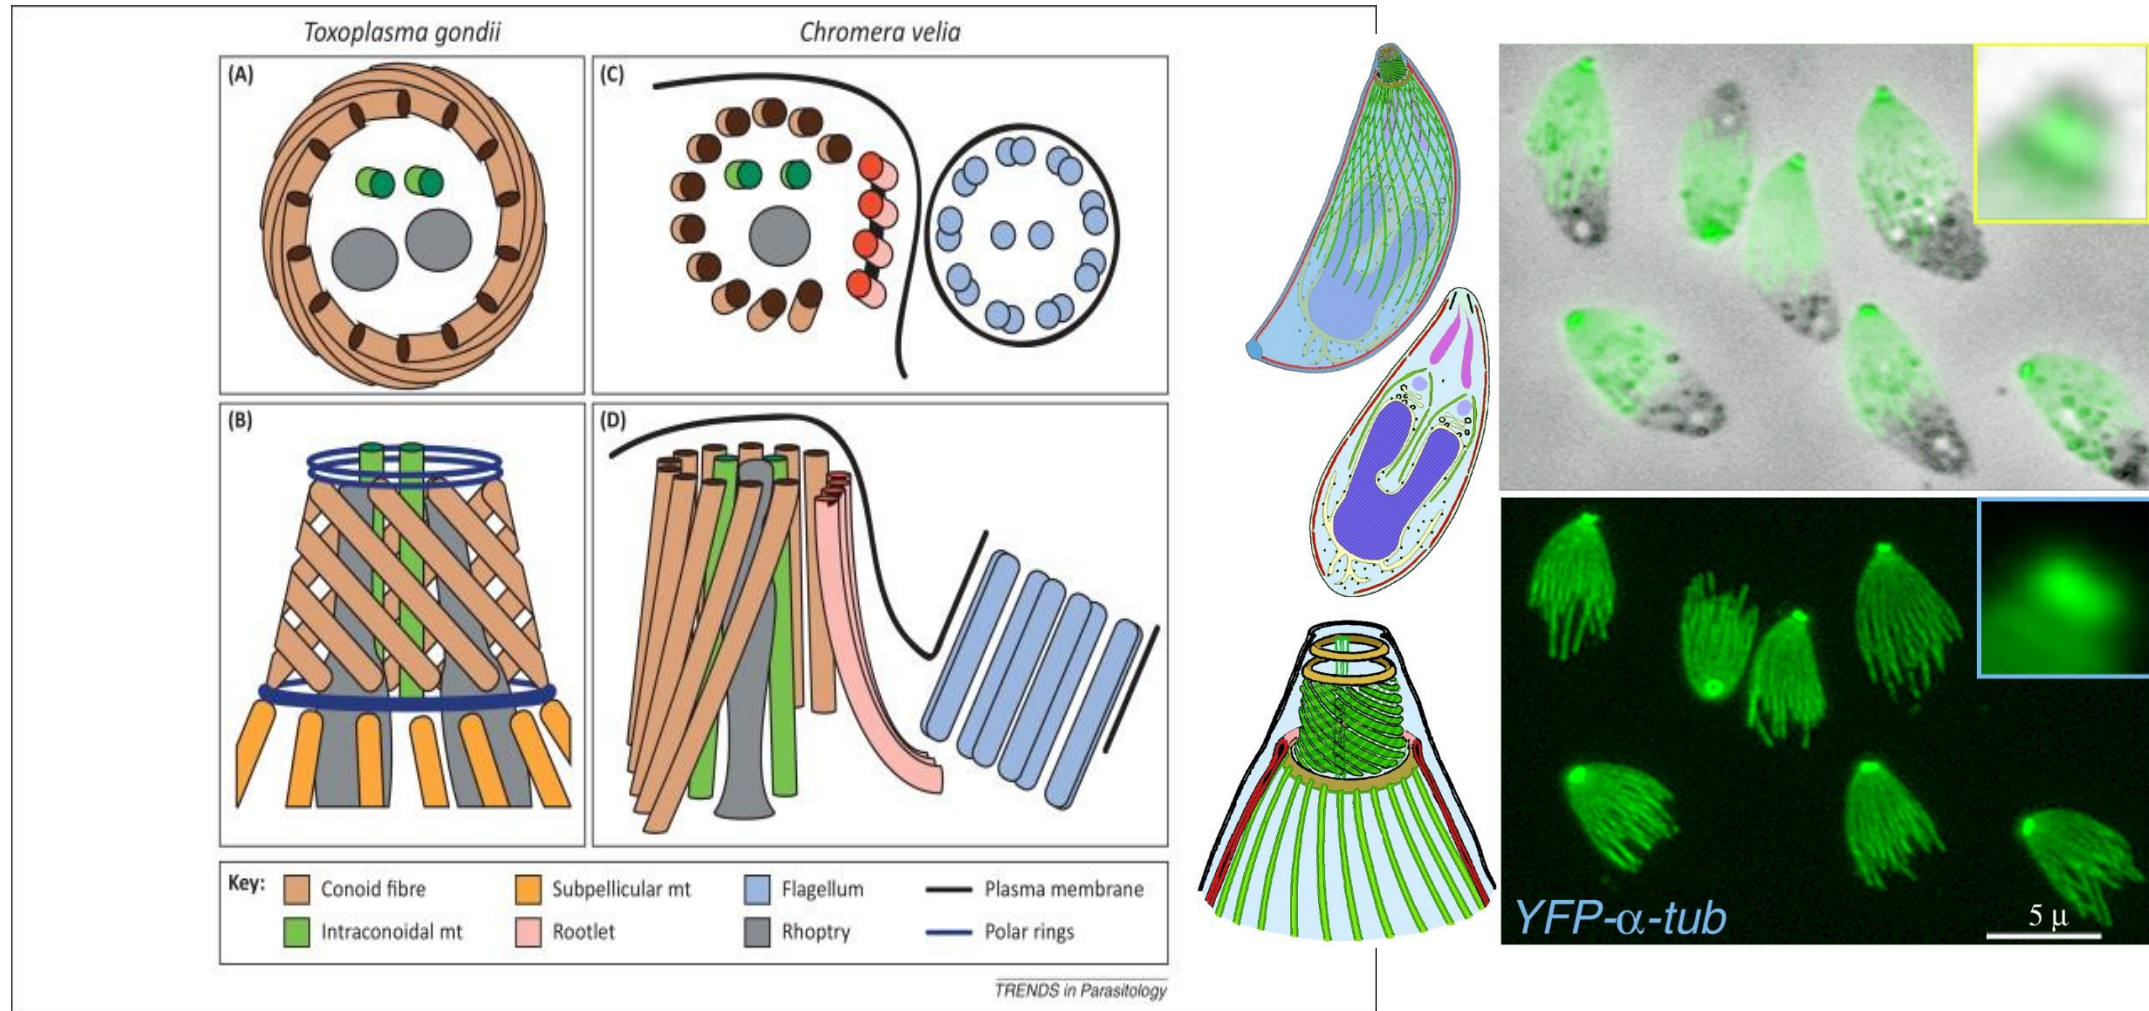

December 2015

An amazing construct. Non-organic appearance

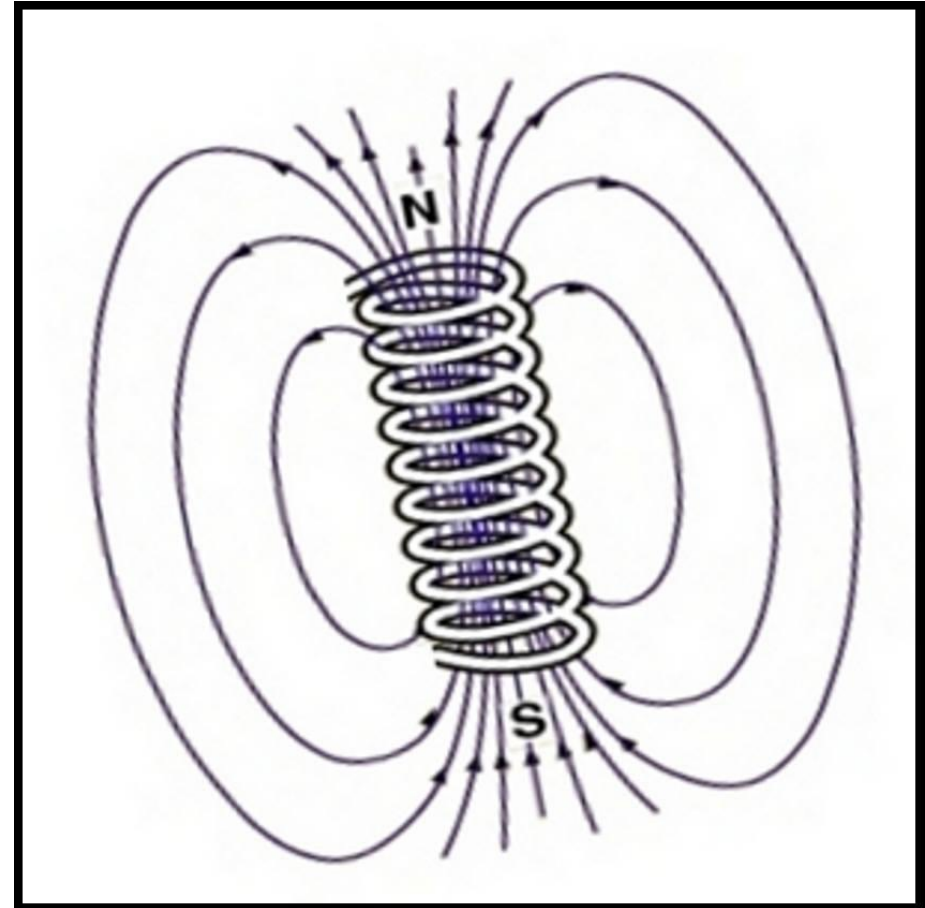

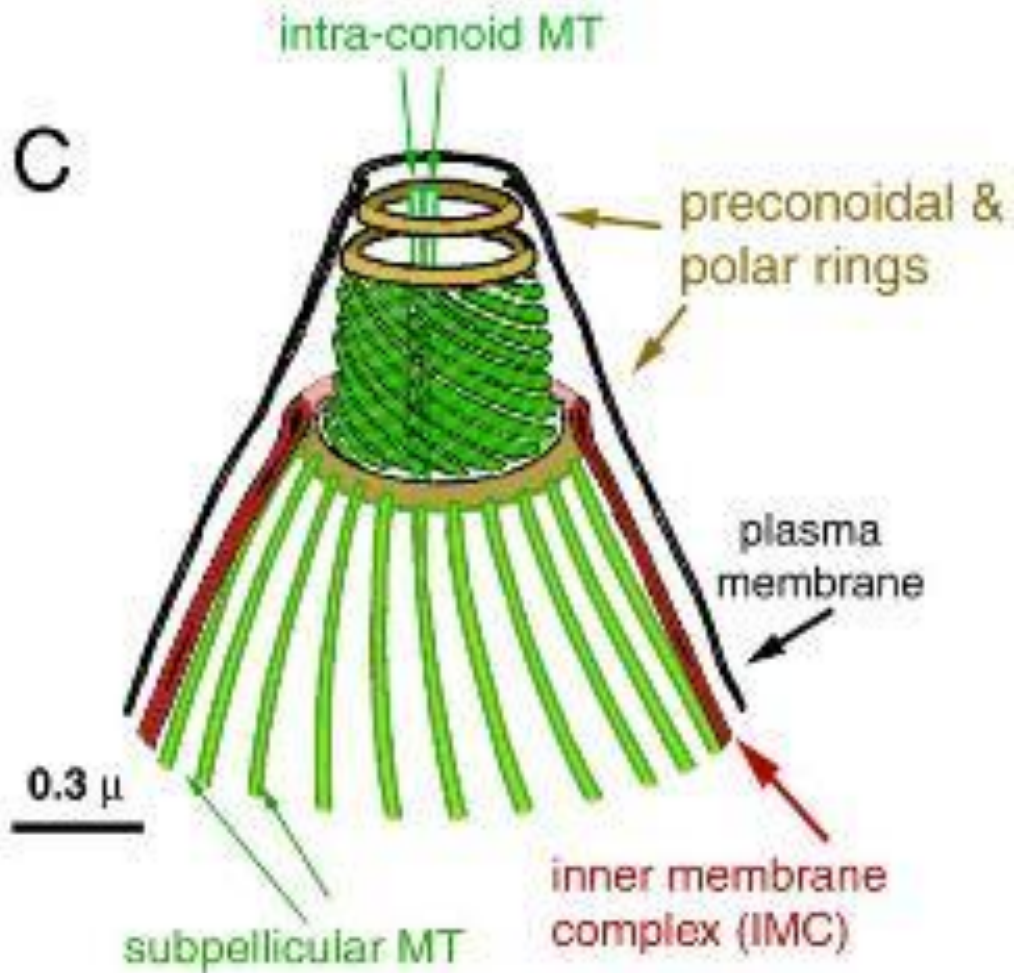

Construct of
Microtubules

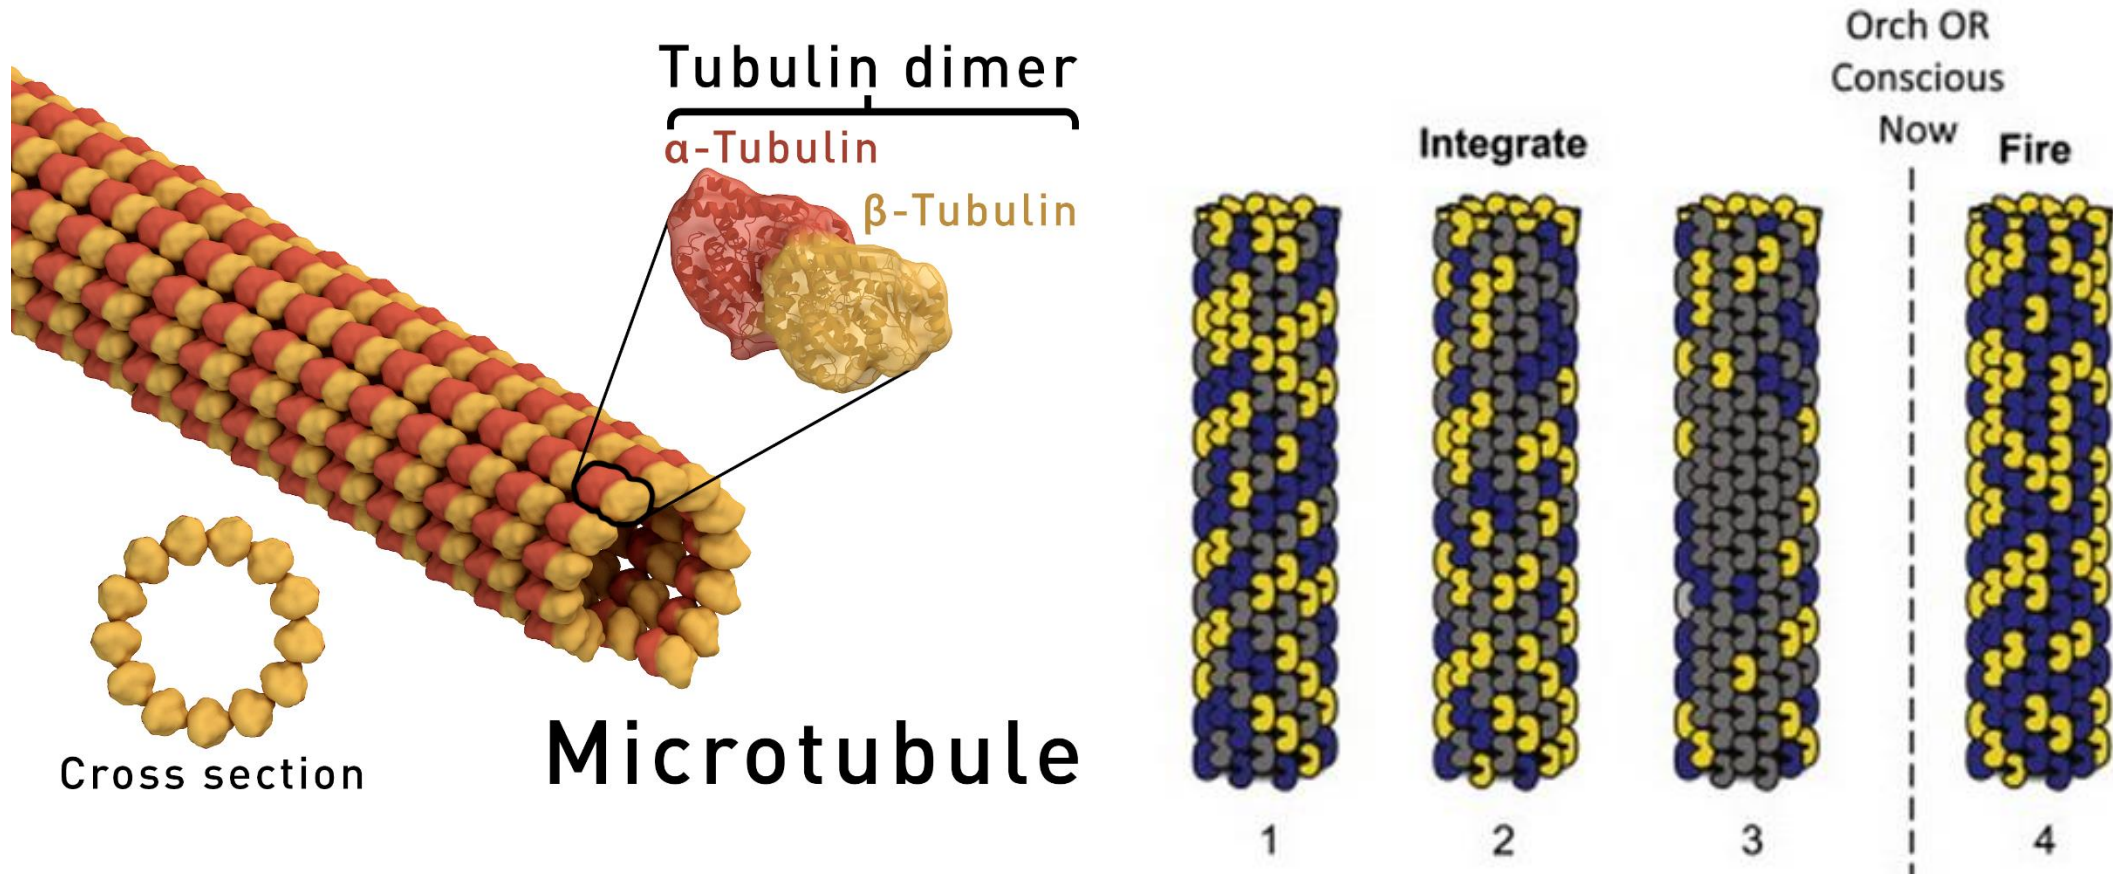

Flagellar components bears witness to extreme complexity

To an engineer it has electromagnetic properties

Microtubules are proven to hold Quantum fluctuations
– and to relate to consciousness

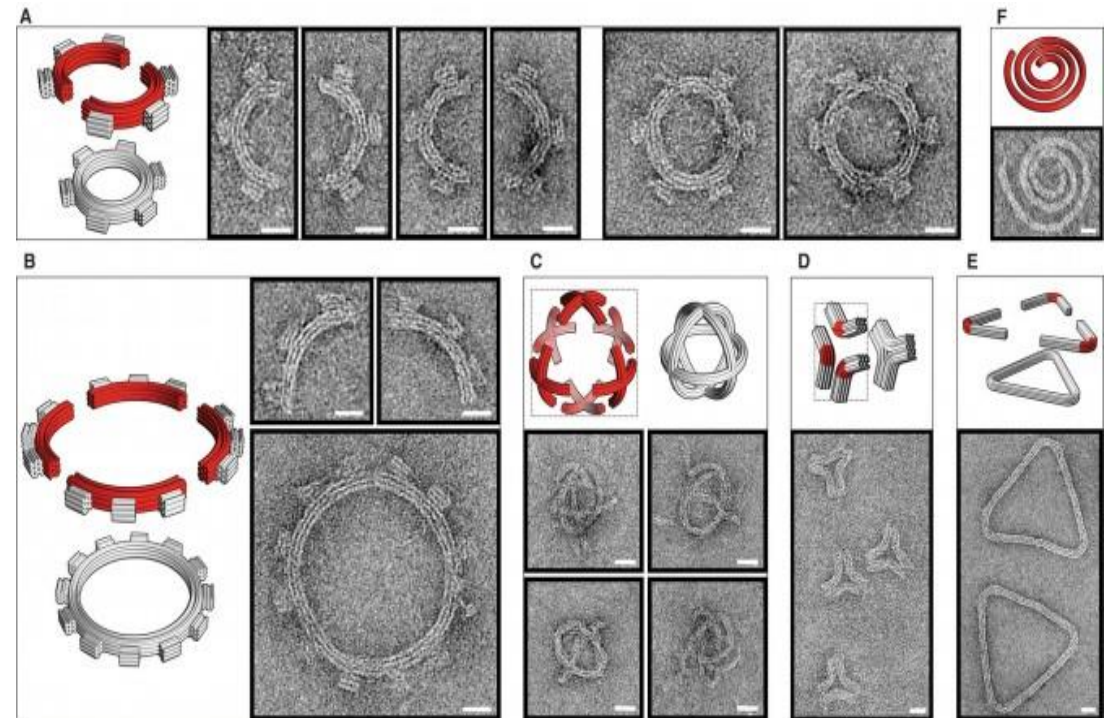

The conoid is a quantum mechanical “device”

- It has a non-organic appearance
- It has micro-scale electromagnetic/induction properties
 - perhaps even scalar properties
- It has nanoscale technological properties
- It uses microtubules that are known as gateways to the unified field

Self-Assembling DNA Makes Super 3-D Nano Machines

The conoid raises several questions

- What is the purpose of the conoid?
 - ...so far science has not come up with an answer. They call it “enigmatic”, “novel” and “surprising”. The microtubules has a novel polymer form not seen before
 - The conoid has “flagellar components” in it. As Flagellum is one of the most complex bio-machines known, this means that TG is in a league of its own
- Why haven't YOU seen or heard about it before?
 - Its complexity is extreme. Its is related to Flagellum. It is in the brain and bodies of millions. It is biological unique and a fantastic construct...so logically it should be known by all of usjust look at the pictures, totally mind-blowing ...right? Will you ever forget having seen them?...Why haven't you seen them before? (this is new to 99,9% of us...)
 - Even among biologists, neurologists, veterinarians, doctors and professionals....no one really knows about the conoid or have heard about it. It has remained hidden....why is that?
 - ...because TG is an expert in remaining UNSEEN, UNQUESTIONED...that is what parasitism is all about

Raise questions!

- Please help raising the important questions concerning Toxoplasma Gondii
- Use you right as a citizen to involve proper authorities
- Demand a factual approach
 - We will share everything we have with anyone wanting to help solve the problem of TG
- Support the research efforts made in identifying and developing solutions
- ***Toxo is a menace – and it targets our children.....help stopping it***
- Ultimately; Toxo is lethal.
