Procent deltagere med målbare koncentrationer af ikke-persisterende stoffer

Børn (4-9 år) 2006-07

Pubertet (6-20 år) 2006-08

Mænd (18-27 år) 2007-09

Gravide kvinder, 2011-12

Korrelation mellem ikke-persisterende stoffer hos gravide kvinder

➤ Danskere eksponeres for mange phthalater, phenoler og parabener samtidig

Phthalat- eksponering gennem det første leveår

- Mindst 30% af alle børn eksponeres gennem det første leveår for phthalater på et niveau, der overskrider EFSA's anbefalinger for anti-androgene stoffer

UV-filtre i danske børnehavebørn

Procent børn med målbare UV-filterkoncentrationer

- Børn eksponeres for nogle UV-filtre året rundt
- Nogle UV-filtre bruges også som absorbere i forbrugerprodukter

Udfasning og substitution

➤ Kræver nye metoder og nye analyser
