Consultation response; Commission staff working document (SWD) on Scenarios for the transition pathway for a resilient, greener and more digital construction ecosystem

The Danish government welcomes the Commission's work for the transition pathway for a resilient, greener and more digital construction ecosystem and appreciates the opportunity to respond to the consultation of the SWD.

From a Danish perspective, we would like to underline the importance of the revision of the Construction Products Regulation to provide a regulatory framework to communicate and declare environmental performances of construction products in a harmonized and standardized manner. In this context, it is important that the solution chosen for the declaration of sustainability properties is comparable across the different directives to which construction products are subject. It is here important to take into account the already significant work with the Environmental Product Declarations under the Construction Products Regulation, which already forms the basis for many construction product declarations. It is also important that it supports the Ecodesign regulation that is essential for achieving the EU's ambition to improve energy efficiency.

The Danish government is looking forward to the future work on the transition pathway for a more resilient, greener and digital construction ecosystem.
