

Folketingets Miljø- og Fødevareudvalg  
Christiansborg  
1240 København K

J.nr. 2024 - 6426  
Den 1. juli 2024

Miljøministerens besvarelse af spørgsmål nr. 923 (MOF alm. del) stillet 11. juni efter ønske fra Marianne Bigum (SF).

**Spørgsmål nr. 923**

"I forlængelse af besvarelsen af MOF alm. del – samrådsspørgsmål AE om ulve, afholdt den 16. maj 2024, og oplysningerne i brevet "Letter to Ambassadors: Don't downgrade wolf protection" fra 10 europæiske organisationer af den 8. maj 2024 om, at ulven har ugunstig bevaringsstatus i 6 af 7 af de relevante af EU's biogeografiske zoner, hvor det i brevet bl.a. anføres: "Despite the fact that the wolf populations are recovering thanks to their strict protection, the wolf continues to be in an unfavourable conservation status in six out of seven EU biogeographical regions according to the latest assessment. Even if the species would be no longer threatened in the foreseeable future, further efforts are required for it to reach a favourable conservation status across the region. Member States are due to assess Favourable Conservation Status of the wolves (and other protected species) in 2025. Adhering to the principles of sound science-based decision-making, it would make it most sensible to await the outcomes of that assessment so that informed decision could be made.", vil ministeren redegøre for ulvens aktuelle bevaringsstatus i de respektive biogeografiske zoner?"

**Svar**

./. Jeg vil henvise til min tidligere besvarelse af MOF alm. del spørgsmål nr. 856.
